

Greetings,

Can you please model a scenario where Australia actually "does nothing" to meet the needs of the energy transition. This way we can get a true value of the opportunity costs/actual costs to the country and its people for taking no action. That would be very helpful.

I would ask that you do not engage in "just in time" building and dismantling of many gigawatts of electrical generating capacity. That's extreme over-fitting.

Thank you,

Sincerely,

Isaac A. Mattoo
